Handling & Storage Instructions

New Element Handling & Storage Guidelines

- Recommended storage temperature: 5°C – 20°C (41°F – 68°F). Do not freeze element
- Handle with care. Damage to elements/end-caps/ATDs can compromise performance
- It is recommended to store elements wet and horizontally
- Whenever possible, store elements in original packaging
- Drying can damage membrane surface and compromise performance
- Membrane elements should be stored in dry, dark, and ventilated conditions

Installation & Initial Use Guidelines

- Prior to use, soak element for 24 hours with portable water then flush for at least 30 minutes
- Elements can be mounted vertically or horizontally
- When mounted vertically, it is recommended to orient feed to flow from top to bottom
- Use water or glycerin to lubricate seal

After Use Storage & Preservation Guidelines

Use standard CIP procedure to clean feed and filtrate from the elements prior to shut down. Then perform element preservation as recommended below:

- 1–7 days: Sanitize element by flushing with 10 ppm bleach and adjust to pH 11 for 30 minutes. Fill up element and housing with fresh 1 ppm bleach solution, seal the housing and store
- 1 week to 6 months: Fill up element and housing with 0.3% Saniclean* solution, seal the housing and store. Every two weeks drain the Saniclean solution from the system and flush with clean water. Refill the element and housing with 0.3 % Saniclean solution, seal the housing and store.
- More than 6 months: Contact PolyCera, Inc. for further information.

Note: Saniclean is a USDA accepted, low-foaming acid anionic rinse product made by Five Star Chemicals & Supplies, Inc. (Colorado, USA). Please contact Five Star Chemicals & Supplies, Inc. or PolyCera, Inc. for further information.
